Be as creative as you like, you are only
limited by your imagination!

Easy to follow
instructions

Bandsaw Boxes Made Easy

By Wood Chuck

Glue up a block to fit your design
– unless you keep 12/4 material
around!

I like to cleanup my blank, but it's not required – it's going to be trimmed away anyway.

This particular block is 3 x 6 x 11, the inner core is Walnut and the outer layers are Lace Wood

If you fail to follow your lines just consider it a design change and keep going 😊

Attach your template with spray adhesive and cut to the outer lines of your template, leaving enough room to sand to the line. The smallest radius of your curves will determine what size of bandsaw blade you need to use!

This design is similar to a picture I found on the internet from: *Lois Keener Ventura*

Bandsaw Boxes Made Easy

By Wood Chuck

It is easier to sand all surfaces now before making any further cuts. The back will then be the same as the main box.

Note: I usually make my boxes around 3" thick so they will fit my spindle sander.

Now – Cut the back off. I usually make the back panel approximately 3/16”– 1/4” Thick. It can be whatever you want it to be.

Bandsaw Boxes Made Easy

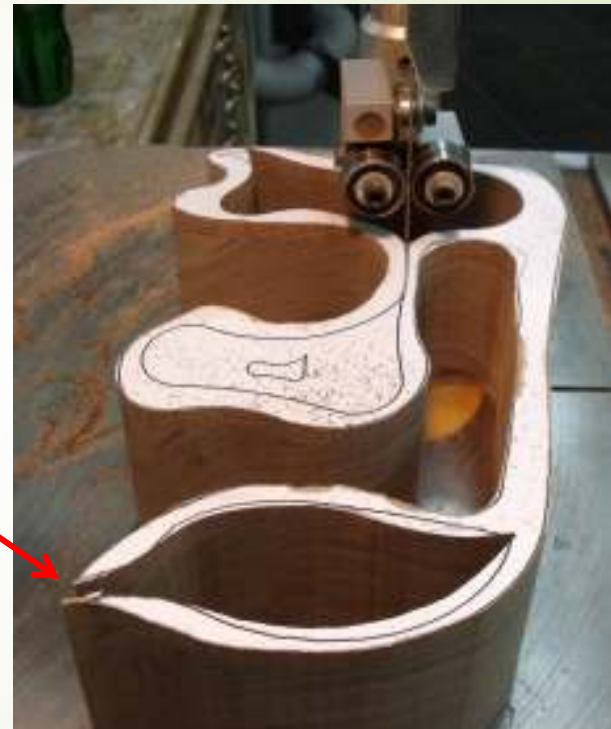

By Wood Chuck

Pick an entrance point and cut out your drawers – in one piece.

On this particular box the case will be left open at this point.

Back – still not attached

This is the entrance point I picked for the 2 lower drawers. It will be glued closed in the next step.

Bandsaw Boxes Made Easy

By Wood Chuck

Here I'm gluing the entrance cut back together. Some times it's a challenge to find a clamping position

While that glue is drying, sand the outside of the drawers. *Keep in mind the more you sand the looser the drawer will fit.*

Bandsaw Boxes Made Easy

By Wood Chuck

Cut off a thin back and front from the drawer pieces you just cut out before you proceed. You may want to mark their orientation to help with re-assembly.

Bandsaw Boxes Made Easy

By Wood Chuck

Layout the portion of the drawer to be cut away. This will be the inside of your drawer when you're finished.

Go ahead and cut away the waste drawer material.

Bandsaw Boxes Made Easy

By Wood Chuck

Sand the inside of your drawers while you still have easy access.

Glue the front and rear drawer pieces back on, finish sand when dry.

Bandsaw Boxes Made Easy

By Wood Chuck

Sand the pulls and glue to the fronts of your drawers.

I usually line the inside of the drawers with felt or flocking.

Choose the material for your drawer pulls (if required) **Carefully cut them out they're very small**
